Andrés Cabrera

Senior Software Engineer

Backend, architecture & product modernization

Remote · Argentina (UTC−3) · info@andrescabrera.com.ar
andrescabrera.com.ar · linkedin.com/in/andrescabrera24 · github.com/andrescabrera

I build backend systems, integrate flight distribution and payment platforms, and modernize existing products. My work combines hands-on engineering, technical leadership and agent-assisted delivery — for both long-term roles and consulting engagements.

AI & Agentic Coding

Agentic Coding: Harness Engineering · Skills · Claude Code · OpenCode
Automation & orchestration: n8n · LangGraph
Fine-tuning & inference: Unsloth · llama.cpp · Ollama · Strata
Agent tool integration: MCP · WebMCP
Local AI models (MoE): Qwen3.6-35B-A3B · Qwen3.8-Flash-Next
Local AI models (Dense): Qwen3.8-27B

Core expertise

Backend: Kotlin · Scala · Java · PHP 8 · Spring · GraphQL · gRPC
Flight distribution: NDC · Amadeus · Sabre · Travelport · Travelfusion · Airline APIs
Infrastructure & events: Docker · Kubernetes · AWS · Kafka · Redis · AWS SQS
Payments: ISO8583 · Netty · Mambu · Webhooks · Project Reactor
Web & data: TypeScript · React · Next.js · SPA · PostgreSQL · MongoDB
Delivery & observability: CI/CD · Google Tag Manager

Selected professional experience

Software Engineer

Apr 2025 — Present

starlings.travel

- Modernized infrastructure and introduced containers in production, optimizing server resources to sustain a recurring volume of 12 million flight searches per day.
- Independently implemented Air Europa (UX/PROS), Turkish Airlines (TK), Volaris (Y4) and Travelfusion integrations.
- Resolved complex Sabre NDC-S and Amadeus NDC-X issues; developed European resident-fare flows for Air Europa and Iberia, and connector features for Arajet.
- Designed and implemented end-to-end observability for Search, Confirm, Issue and Retrieve, including Ancillaries and Exchange.

Founding Engineer

Apr 2023 — Apr 2025

eSportunity

- Built an event-driven esports platform as part of the founding engineering team, from initial development to production launch. The product was subsequently discontinued.
- Implemented real-time chat with WebSockets and Redis Pub/Sub that served thousands of concurrent users in production.
- Developed post lookup algorithms with an estimated 40–60% improvement in timeline rendering for the planned user base.
- Contributed to technical and business decisions and recruited specialized engineers to accelerate the production launch.

Selected consulting project

Forward Deployed Engineer
2025 — 2026

Venetravel · venetravel.net

- Re-architected the application from server-rendered HTML to a modern SPA and migrated the backend from PHP 7 to PHP 8.
- Enabled agentic search through MCP and WebMCP, and added site tracking with Google Tag Manager and observability tools.
- Directed an agent-driven development workflow, delivering the modernization in stages from planning in 2025 to completion in 2026.

Professional experience · continued

Software Developer & Tech Lead
Nov 2020 — Apr 2023

Rappi · RappiPay

- Led the Authorizer team, working on card authorization, anti-fraud systems and ISO8583 integrations using Netty.
- Led the wallet movements core redesign and development of new features, coordinating engineers across Mexico, Colombia and Argentina.

Software Developer
Mar 2020 — Nov 2020

FinTech Banking Startup

Designed and delivered a loan disbursement solution with Project Reactor and AWS SQS. Maintained Mambu-based banking APIs and integrated STP (Mexico) and Instantor (Spain).

Software Developer
Oct 2018 — Mar 2020

Despegar.com

Developed Scala services for voluntary flight exchanges, resolving ticketing and exchange integrations with Sabre, Travelport and Amadeus, and implementing fare arbitrage logic.

Full Stack Java Developer
Jan 2018 — Oct 2018

Avantrip.com

Developed a travel back-office platform with Spring and Angular, including a SAP Travel One billing integration using Spring Cloud Stream.

Full Stack Java Developer
May 2017 — Jan 2018

Monsanto

Project contract · 8 months

Worked on the Value Capture Transformation project, migrating royalties and billing integrations to an event-driven cloud architecture with Kafka Streams and Spring Cloud Dataflow.

Java Software Developer
Oct 2016 — May 2017

Banco Galicia

Developed modules for a multi-channel banking application using Spring Dynamic Modules and OSGi.

Full Stack Java Developer
Jun 2015 — Oct 2016

IBM · HSBC Bank

Developed the Money Markets application migration for HSBC, including the MatriXS Evergreening SPA, backend services and dynamic scripting tools.

Earlier experience in middleware and enterprise applications at Efectivo SI, Dirección Nacional de Migraciones and Edesur.

Education & languages

Undergraduate studies in Computer Science — Universidad de Palermo

Spanish · English: working proficiency
